

	EUROPEAN UNION	CHINA	SAMOA
INITIAL PROPOSAL	<p>Our primary goal is to fight against the climate change and reduce the greenhouse gas emissions as much as possible. We want to support ideas regarding investing into researches and technology that can help to reduce our carbon print in the planet.</p>	<p>-All of the industrialized countries should help the developing countries in the climate measures they have taken, at least at least 0.5 % up to 1% of their GDP.</p> <p>-western countries should stop sending their plastic waste to China.</p> <p>-introduce many technology innovations in our every-day life.</p> <p>-reduce dependence on fossil fuels and coal</p> <p>-increase forested areas to fight deforestation and loss of bio-diversity</p> <p>-increment the use of nuclear energy</p> <p>-environmentally friendly developpement</p>	<p>Every country should use as much renewable energy instead of fossil resources as possible. Recycle your trash. Find clean alternatives for things like cruiseships etc. Punish countries or companies which don't aim for climate neutrality by 2050.</p>
	JAPAN	USA	BANGLADESH
	<ul style="list-style-type: none"> - We see nuclear power as an important part of the future energy supply - We believe in technical solutions. - We believe in innovation and energy efficiency. - We need innovations in our social infrastructure and life. - Support the cooperation. 	<p>We think there is no climate change, or, at least, it is not caused by us, it can be a natural thing. So, you can do what you want, we are not going to change. It is also for economy.</p>	<p>Countries such as Japan and the European Union have not fulfilled with the Kyoto Protocol, our planet is suffering the consequences of climate change, our purpose is for these countries to reduce their emissions by 80% in 2050, we also propose that new technologies be shared to our poor country.</p>

FINAL PROPOSAL

All of us except the USA agreed with the fact that sharing, or at least helping, other countries to develop their own technology in order to face the climate issue is necessary and helping poor countries with technologies is necessary too. New technologies are of uttermost importance to stop climate change. Because of the fact that emission in a single country affects all the world, other countries should cooperate to make this country understand it, however, if this country will continue disregarding climate issues, they might be punished.
